## **AMENDMENT**

## Please amend the claims as follows:

1. (Twice Amended) A system for displaying program information comprising: a first information handling system capable of being coupled to a first display;

a second information handling system capable of being communicatively coupled with said first information handling system, and having a second display disposed on a housing thereof;

said first information handling system being capable of displaying program content on said first display;

said first information handling system being capable of responding to a predetermined event by communicating event related program guide data to said second information handling system; and

said second information handling system being capable of displaying event related program guide data on said second display, wherein said second information handling system receives an input for event related program guide data, the second information handling system determines whether event related program guide data is available in the second information handling system, and, in the event the event related program guide data is available, the second information handling system displays the program guide data, and, in the event the event related program guide data is not available, the second information handling system sends a request for the program guide data to the first information handling system.

8. (Twice Amended) A system for displaying program content and program guide data, comprising:

means for receiving program content and program guide data;

first means, coupled with said receiving means, for displaying the program content;

means for obtaining program guide data related to an event from said receiving means in response to the event; and

Cond

Contd

coul.

second means, coupled with said obtaining means, for displaying the event related program guide data obtained from said receiving means, wherein an input for event related program guide data is received and a determination made as to whether program guide data is available to the second means, and, in the event the event related program guide data is available, the second information handling system displays the program guide data, and, in the event the event related program guide data is not available, the obtaining means sends a request for the program guide data.

14. (Twice Amended) A method for displaying program guide data, comprising: receiving an input for event related program guide data;

determining whether the event related program guide data is available in a remote device, and, in the event the event related program guide data is available, the remote device displays the program guide data, and, in the event the event related program guide data is not available;

sending a request for program guide data to a host device, whereby the event related program guide data requested corresponds to the received input;

upon receiving the request, fetching event related program guide data;

transmitting the event related program guide data to a remote device; and

upon receiving the event related program guide data, displaying at least a portion of the event related program guide data on a first display of the remote device such that event related program guide data may be viewed independently from program content.

21. (Amended) A program of instruction storable on a computer readable medium capable of causing an information handling system to execute steps for displaying program guide data, the steps comprising:

Cata

upon occurrence of an event, receiving an input for causing an information handling system to determine whether event related program guide data is available in a remote device, and, in the event the event related program guide data is available, the information handling system does not fetch the event related program guide data from a database, and, in the event that the event related program guide data is not available to fetch event related program guide data from the database;

Covel

transmitting the event related program guide data from the information handling system to a remote device via a communications link between the information handling system and the remote device;

storing the transmitted event related program guide data in a memory of the remote device; and

displaying at least a portion of the event related program guide data stored in the memory on a first display disposed on a housing of the remote device.

Cord

31. (Amended) A method for displaying program information comprising: upon occurrence of an event, sending a request for program guide data to a second

upon receiving the request, fetching event related program guide data;

information handling system from a first information handling system;

transmitting the event related program guide data to the first information handling system; and

upon receiving the event related program guide data, displaying at least a portion of the event related program guide data on a first display of the first information handling system, wherein said event related program guide data on said first display corresponds to electronic program guide data displayed on a second display of said second information handling system.

Conel.

35. (Amended) The method as claimed in claim 31, further comprising determining whether the event related program guide data is available in the first information handling system, and in the event the event related program guide data is not available, executing said sending step.
